Overview

This module

- Describes how to take barometric pressure observations
- Provides instructions on how to enter your data on the GLOBE website

Learning Objectives

After completing this module, you will be able to

- Describe what barometric pressure is.
- List reasons why it is important to collect barometric pressure data
- Determine the correct locations to take barometric pressure readings
- Upload data to GLOBE website
- Visualize data using GLOBE Visualization Site and formulate your own questions about weather

Estimated time to complete module: 1 hour

Barometric Pressure

A. What is barometric pressure?

B. Why collect barometric pressure?

C. How your measurements can help

D. How to collect your data

E. Entering your data

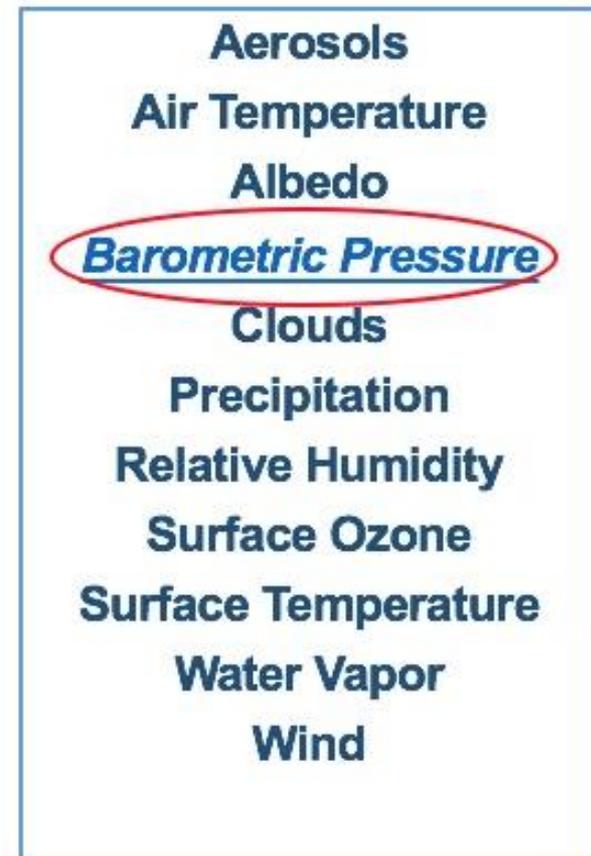

F. Understanding the data

G. Quiz Yourself

H. Frequently Asked Questions

I. Further Resources

- Measures the weight of the atmosphere per unit area
- Is the weight (force) of the air pushing on each unit of surface area on the ground
- Increase or decrease indicates upcoming weather change
- High pressure generally brings fair weather, and low pressure is associated with “bad weather”
- [Link to Barometric Pressure Protocol here](#)

A. What is barometric pressure?

B. Why collect barometric pressure?

C. How your measurements can help

D. How to collect your data

E. Entering your data

G. Quiz Yourself

H. Frequently Asked Questions

I. Further Resources

Recording barometric pressure is important for many reasons:

- Used to predict the weather
- Used to interpret measurements of aerosols, ozone, and water vapor

A. What is barometric pressure?

B. Why collect barometric pressure?

C. How your measurements can help

D. How to collect your data

E. Entering your data

F. Understanding the data

G. Quiz Yourself

H. Frequently Asked Questions

I. Further Resources

YOUR measurements can help NASA scientists to

- Understand and predict the weather (air temperature, rain, relative humidity, cloud conditions, atmospheric pressure)
- Understand Atmospheric Composition (trace gases and particles in the air)
- Interpret aerosols, ozone, and water vapor measurements

Example: NASA's Aquarius Mission

A. What is barometric pressure?

B. Why collect barometric pressure?

C. How your measurements can help

D. How to collect your data

E. Entering your data

F. Understanding the data

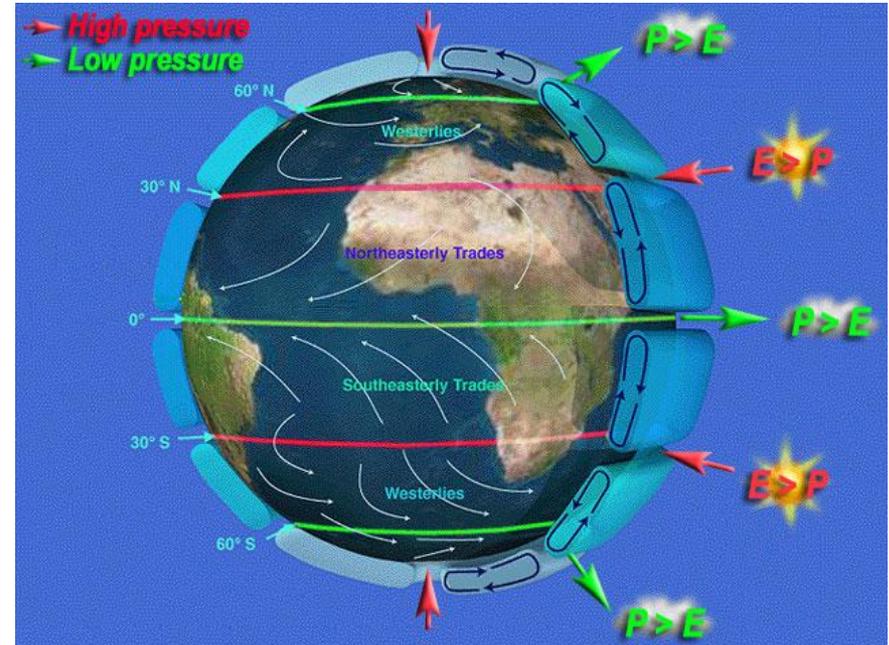

G. Quiz Yourself

H. Frequently Asked Questions

I. Further Resources

- Studying the relationship of ocean salinity and atmospheric pressures which vary on Earth.
- Image illustrates the pattern of atmospheric pressures on Earth. Atmospheric pressure highs are at the poles, 30°N and 30°S. Atmospheric lows are along the equator, 60°N and 60°S.
- Cloudiness and precipitation (P) dominate bands of low pressure. At these latitudes, world's rainforests are located. Dryness and evaporation (E) dominate bands of high pressure. At these latitudes, deserts are located.

Calibrating your Instrument: Aneroid Barometer

[Calibration of Aneroid Barometer](#)

- 1) Inspect your barometer; it will most likely have two different scales, one in millibars (or hectopascals) and one in millimeters (or centimeters) of mercury. All of your measurements for GLOBE should be taken in millibars or hectopascals (remember, these are equivalent).
- 2) Find a local reliable weather information source, which provides measurements of pressure. Compare to see if the readings are the same. Once you have obtained an accurate sea level pressure reading in millibars or hectopascals, reset your barometer to this pressure reading using a small set screw on the back of the barometer (this should only be done by the teacher!).
- 3) There is a needle that can be set to the current reading each day – you should do this each day after you take your pressure reading.
- 4) When you take tomorrow's reading, your barometer's set needle will read yesterday's value, and you can instantly compare to see whether pressure is higher or lower now than the day before!
- 5) Calibrate every 6 months.

A. What is barometric pressure?

Collecting Data-2

- 1) Collect data daily within one hour of local [solar noon](#). Record the time (local or UTC) and date on the [Integrated 1-day Data Sheet](#).
- 2) Tap gently on the glass cover of the aneroid barometer to stabilize the needle.
- 3) Read the barometer to the nearest 0.1 millibar (or hectopascal).
- 4) Record this reading as the current pressure.
- 5) Set the “set needle” to the current pressure.

- You have 3 options:***
- 1) Download the Data Entry app from the [App Store](#)
 - 2) [Live Entry](#): These pages are for entering environmental data – collected at defined sites, according to protocol, and using approved instrumentation – for entry into the official GLOBE science database.
 - 3) [Email Data Entry](#): If connectivity is an issue, data can also be entered via email.

Entering Barometric Pressure Data-2

1) Go to GLOBE.gov and press enter data

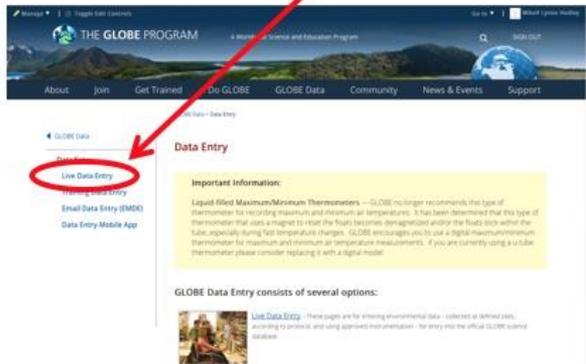

The screenshot shows the GLOBE Program website interface. At the top, there is a navigation bar with the GLOBE logo, the text 'THE GLOBE PROGRAM A Worldwide Science and Education Program', a search icon, and a 'SIGN IN' link. Below the navigation bar is a featured article titled 'GLOBE Welcomes Mauritius as Newest Partnering Country' with a sub-headline 'On 5 October 2015, Acting Senior Chief Executive R.P. Ramjugun, Ministry of Education and Human Resources, Tertiary Education and Scientific'. A red arrow points from the top right of the page down to the 'Support' link in the navigation bar. Below the navigation bar, there is a 'RECENT MEASUREMENTS' section with a list of measurements. The 'Enter Data' button is circled in red, and a red arrow points from the top right of the page down to it.

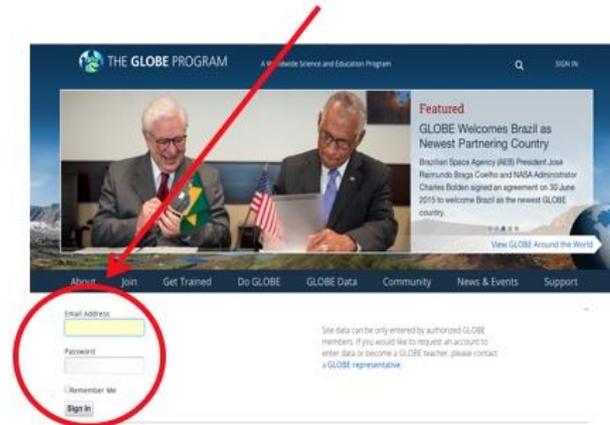

Entering Barometric Pressure Data-3

Questions for YOU to Investigate

- After recording your pressure readings for a month, make a graph of your pressure observations and also plot the daily precipitation. Do you see a relationship between these observations?
- Is there any relationship between your data from the *Cloud Protocols* and barometric pressure?
- Use pressure data from several GLOBE schools adjusted to sea level pressure to see if you can locate where high and low pressure areas are for a given day. How well do your findings compare with weather maps from your local newspaper or any other source?

A. What is barometric pressure?

B. Why collect barometric pressure?

C. How your measurements can help

D. How to collect your data

E. Entering your data

F. Understanding the data

G. Quiz Yourself

H. Frequently Asked Questions

I. Further Resources

1. If we missed reading the barometric pressure for a day or more (over the weekend, holiday, vacation, etc.), can we still report the pressure today? Yes, you are only reporting today's pressure, so please report it as often as possible.

2. I really don't understand the difference between barometric station pressure and sea level pressure.

Since weather stations are spread all over the world at many elevations, and since pressure decreases rapidly with elevation, meteorologists need a way to map horizontal pressure patterns using a constant reference altitude. The easiest way to do this is to convert all observed pressure values to sea level pressure. In GLOBE barometric pressures are reported as sea level pressures but can be accessed and visualized as either sea level or station pressures, as the database is capable of making corrections to compensate for elevation changes.

3. Why do we have to reset the "set needle" each day?

The set needle is used to identify the previous pressure reading. Using it, you can instantly compare the current pressure reading to the previous one. For example, if the pressure is lower today than yesterday, you might ask yourself if the weather is stormier?

6. How accurate are these pressure readings, compared to those that might be taken with mercury barometers? Today's aneroid barometers are not as accurate, in general, as well-made mercury barometers. There are some electronic barometers that have very accurate measurements, but the relatively inexpensive instruments that meet GLOBE specifications have all the necessary accuracy for our pressure measurements (about 3 to 4 mbar).

7. Why does pressure always decrease with height in the atmosphere? Because pressure is a measure of the mass of the atmosphere above you (air does have mass!), as your elevation increases, there is less air above you, so pressure is less.

8. Why do high altitude GLOBE schools have to use an altimeter? Most aneroid barometers are designed to be used near sea level. Altimeters are special aneroid barometers designed to be used at higher altitudes (including aircraft). At an altitude of 500 m above sea level, we would expect atmospheric pressure to be no greater than 1000 mbar and down to as low as 900 mbar for intense storms. Most aneroid barometers, however, have 950 mbar as the lowest possible measurement.
